The Triple balance beam is a playground classic. Children are always running, jumping, or balancing on low beams, due to their low height which feels safe and fun. It will be a challenge to see who can get to the end, without falling off. These beams can also function as a resting point though, for carers to sit and observe the play. It is made of Robinia

timber, which provides an organic structure, that can either blend into or stand out from your surroundings. Children can touch and feel the timber while playing, observing how nature inspiration interacts with the built environment.

The overall framework applied for these factors is the Environmental Product Declaration (EPD), which quantifies "environmental information on the life cycle of a product and enable comparisons between products fulfilling the same function" (ISO, 2006). This follows the structure and applies a Life-Cycle Assessment approach to the entire Product stage from raw material through manufacturing (A1-A3))
