The water seesaw will fascinate children and invite hours and hours of construction play. The water seesaw is a fine transporter of water and sand, leading materials from one end to the other when inclined. This trains children's construction play skills as well as their logical thinking. Adding transportation of materials to sand-and-water play was always an attraction.

Here, having the possibility to shift materials through the long tube, children will be able to play in bigger groups together. This trains cooperation, negotiation and turn-taking skills. These are all social skills that are hard to teach, but easy to learn in play.

Tilted water channel

Social-Emotional: children cooperate, communicate and take turns when running water through the channel. **Cognitive:** supports logical thinking and cause and effect understanding when leading materials from one end to the other. **Creative:** changing the position of the channel, making it tilt to one or the other side.

The overall framework applied for these factors is the Environmental Product Declaration (EPD), which quantifies "environmental information on the life cycle of a product and enable comparisons between products fulfilling the same function" (ISO, 2006). This follows the structure and applies a Life-Cycle Assessment approach to the entire Product stage from raw material through manufacturing (A1-A3))
