Pot

Cognitive: the pot can be removed, stimulating cause and effect understanding. Filling and emptying the pot stimulates logical thinking and the understanding of concepts such as empty and full. **Creative:** placing the pot in other areas of the play space in creative ways can support symbolic and creative thinking.

String with knobs

Social-Emotional: turn-taking and cooperation are supported when pulling the string from side to side with friends or caregiver. **Cognitive:** an understanding of object permanence is supported when the knob disappears and reappears when pulled. **Creative:** leaving the knob in different positions can support symbolic and creative thinking.

Flap door

Physical: tactile stimulation from leaning the body through rubber doors. **Cognitive:** suggests a theme and supports dramatic play, which stimulates language and communication skills.

Post box

Social-Emotional: peep-holes and two sided activities support cooperation, turn-taking and social play skills. **Cognitive:** rubber flap adds tactile variation that helps children to understand the characteristics of different materials and their uses. Putting things in post-box stimulates an understanding of object permanence: that objects may still exist when out of sight.

Shoelaces

Cognitive: tactile variation helps children to understand the characteristics of different materials and their uses. Logical thinking and memory skills are supported when tying laces correctly.
