The Triple Balance Beam is a great playground classic that attracts children again and again. It can function as playground glue, connecting activities. It can also function as a point for a break, providing seating for children sharing, or parents or caregivers in need of a point from which to observe play. When children balance across the Triple Balance Beam, they train their

equilibrium immensely. The sense of balance is a fundamental motor skill that is basic for the development of all other skills. The sense of balance for instance makes it possible for children to sit still and concentrate, so the fun of physical play supports child development. The spaciousness also allows for substantial social interaction and cooperative play.

The overall framework applied for these factors is the Environmental Product Declaration (EPD), which quantifies "environmental information on the life cycle of a product and enable comparisons between products fulfilling the same function" (ISO, 2006). This follows the structure and applies a Life-Cycle Assessment approach to the entire Product stage from raw material through manufacturing (A1-A3))
