The shading provides protection from harmful ultraviolet (UV) radiation. By incorporating shaded areas, playgrounds offer a safer environment where children can play for longer periods without the effects of direct sun exposure.

Shade structures help to regulate the temperature on playgrounds, making the environment more comfortable for children and caregivers. Direct sunlight can cause playground equipment, to become very hot, posing a risk of burns. Shaded areas remain significantly cooler, preventing overheating of the equipment.

The overall framework applied for these factors is the Environmental Product Declaration (EPD), which quantifies "environmental information on the life cycle of a product and enable comparisons between products fulfilling the same function" (ISO, 2006). This follows the structure and applies a Life-Cycle Assessment approach to the entire Product stage from raw material through manufacturing (A1-A3))
