The play attraction of this unit is expressed already at ground level: A goose game allows for some individual or small group explorative play, and fun play shape steps lead to the first floor and the fast slide. Looping steps and slide again and again, a KOMPAN Play Institute survey shows, make children play for as much as 15 minutes in active play, training muscles

and motor skills while having fun. On the second floor a suspended rope with a lovely UFO seat also offers a good grip support to get to the slide floor. The top floor is a fine, more quiet play area with a speed-ball for sitting on or just climbing over. Thanks to the see-through panels the play levels feel secure for children and care-givers alike. The loops of

activity and the rough-and-tumble exploration help children develop their motor skills and muscles, training the senses of balance and space as well as their self-esteem and turn-taking skills through fun play.

Bureau Veritas hereby attests that the CO₂e-calculations (covering materials, processing, waste and transport) done by Kompan for "Play Systems", meet the requirements set by the listed standard.

Kompan A/S uses a selection of EPDs and emission factors from the Life Cycle Assessment database Ecoinvent 3.11. These values are reported as kg CO₂e, with all other impact categories excluded in line with the scope of ISO 14067:2018. The emission factors cover, material use, manufacturing processes, transport to Kompan, and electricity used during manufacturing. The presented emissions fall under GHG Protocol scope 3 emissions.
